Denwa LDAP

Introduction:

Denwa LDAP is recommended for private, banking and government institutions that use a user management and management system through platforms such as Active Directory (AD) or Novell Directory Dervices (eDirectory), among others.

Features:

- Contact synchronization and user management from a single platform is one of the most widely used tools regardless of the size of organizations.

- The tendency to centralize the administration, leads to the necessity that, independently of the platform, through a common means to manage the contacts by areas and subareas. In addition, this management allows to enable users to different services within the organization.

- The most used protocol within the management platforms is the LDAP, and Denwa incorporates through the LDAP modules the ability to interact with these platforms.
